Communication
(AAC)**

**Receptive &
Expressive Language
&
Pragmatic/Social
Communication**

Speech-Language Pathologists

Speech-language pathology is both rehabilitative and preventative

Speech Pathologists are:

- Master's-level clinicians
- Nationally credentialed and state licensed
- Clinically trained across medical and educational settings
- Specialists in communication, cognition, and swallowing

Our training spans brain function, anatomy, development, and behavior across the lifespan – because communication touches every part of it.

Where We Work

- Neonatal Intensive Care Units (NICU)
- Acute care hospitals
- Inpatient rehabilitation hospitals
- Outpatient clinics
- Skilled nursing facilities
- Assisted living communities
- Public & Private schools
- Early intervention programs
- Home health
- Private practice
- University clinics
- Telehealth settings
- Palliative and hospice care
- Research and academia
- Consulting roles
- Corporate or professional communication coaching

At its core, speech-language pathology is about preserving and strengthening connection – at every stage of life.

Examples of Who We Serve

- Premature infants in the NICU
- Toddlers learning first words
- School-age children
- Adolescents navigating academics and social demands
- Adults recovering from injury or illness
- Older adults experiencing cognitive or neurological changes
- Individuals at end of life needing safe swallowing and communication support

This list is not exhaustive. We work with people of all abilities, backgrounds and diagnoses

Collaborative Team Care

We integrate and work with many of the following, and more!

Maria Bailey, MS., CCC-SLP
